

## Club Rotario La Paz Balandra

**Project:** " School Units of Production"

**Beneficiary Schools:** 4 poor Agricultural Technical Secondary School in Baja California Sur., Mexico.

**Benefited students:** 12,510

**Objective:** Convert them into self-sustaining schools through the implementation of the " School Units of Production" where they can learn agriculture in a modern way and sell their own products to the community

Total Amount around of the Project: 100,000 USD

The La Paz Balandra and La Paz Guaycura Rotary Clubs have around 20,0000 + 4,000 USD from our District 4100,

**Needs:** One or several Foreign Clubs that wish to contribute to the project at least 3,000 USD and one or more Foreign Districts that want to contribute at least 7,000 USD in order to complete the project in a Global Grant.

**There are poor communities in Mexico where it is necessary to implement cooperative societies called "SCHOOL UNITS OF PRODUCTION" through the students of agronomy of the level of Basic Education**

In B. C. S., Mexico there are 4 Agricultural Technical Schools where their tractors no longer work because they have more than 45 years of service

**The students of agronomy of the level of Basic Education work the land with their hands and their mentality is limited by not having access to modern technology and they depend totally on external help.**

**They are exposed daily to accidents, animal bites and intense heat, without possibilities of progress**

**We have already managed to implement a School Unit of Production. Now the students have raised their level of knowledge and have better opportunities.**

**Currently this school is self-sustaining, thanks to the support of Rotary.  
Now their agricultural production is sold in their same community.**

**The Rotary Clubs La Paz Balandra and La Paz Guaycura need your support to help develop other 4 Agricultural Technical Schools in Baja California Sur., Mexico and make them self-sustaining by selling their production, getting their students to learn agriculture in a way modern and changing their mentality, This through the School Units of Production.**
