Pomegranate Village.

**Subject:-** Technical Data for Desilting Varkute Minor Tank.

**Reference:** Your Request latter dated 09/02/2021

With Reference to above mentioned matter Construction of Varkute Minor tank is Completed in year 1964. Total storage capacity of tank is 50.48 Mcft (1500 Million Ltrs approx.) Irrigable Command Area of Project is 200 Ha. Water Supply Schemes of village Varkute & Nimgaon Ketki is Dependent on Tank for Drinking purpose. Percolation occurred from tank benefits to improve ground water storage of wells in near by area.

As the tank is completed more than 55 years back probability of Considerable silt deposition occred in tank. Desilting work as sateted in your letter will helps to increase storage capacity of tank & also improves the Ground Water Table. Before starting actual execution of work it is mandatory to take prior permission from Water Resources Department

**Subject: Request for desilting of Varkute pond.**

## Information about community

Sir,

Myself as the state government chief administrator for village Nimgaon ketki, Varkute request your club, belonging to rotary, a renowned social service organization, to desilt percolation tank of Varkute Khurd, having area of 100 acres. This tank is in the adjoining village Varkute khurd. This tank is the only drinking water provider to villages Nimgaon Ketki, Varkute Khurd, Kati and Pitkeshwar. The work will be carried out under government supervision. All the four villages are in taluka Indapur, and district Pune, in Maharashtra state. The population of Nimgaon Ketki is 20500, twenty thousand five hundred in words. Presently the water is provided from three sites, namely, the Gavthan (village core area), Gadad vasti, and Rautwadi, through pipes. All the water schemes depend on single percolation pond of Varkute khurd. This village is recognized by government as draught prone. Drinking water is supplied by water tankers for summer four months. There are ten tankers per day. Cost of each tanker for drinking water is INR 1500/-. The subsistence of 70% population is on agriculture, or agricultural related businesses. There are two public wells on lowerside of percolation pond. They have water distribution systems. Water in pond percolates to wells. The heavy silt in pond has reduced it's water holding capacity. Desilting will increase percolation and holding capacity.

Thanks And Regards,

L.K. Jagtap

**Applicant:** Village development officer ( chief administrator) ,  
Grampanchayat ( village govt. office)Village Varkute Khurd.

**Subject:** Desilting of Varkute percolation pond

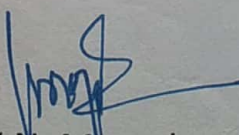

**Reference:** Your letter dated 10/12/ 2020

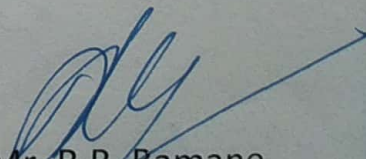

Sir,

Our main source of water is 100 acres percolation pond. Near the pond we have a public well with a water distribution system. Population of this village is 4800 . It gets drinking water from the well. Desilting of percolation pond will help all population get drinking water even in summer. Presently in summer government tankers supply water. The 30 wells in various farmlands will also get irrigation water in summer. Near about 200 hectars of agriculture land is getting irrigated. We request rotary club to desilt the tank.

We will provide all the assistance.

Yours Faithfully

  
Mr. V.N. Margal
