

Project: "Helping Ukrainian People Survive in the War Zone."

In the Dnipropetrovsk region of the Ukraine, there is the city of Nikopol, located on the opposite side of the Kakhovka reservoir, the Zaporozhye nuclear power plant and Russian occupied territory. The city of Nikopol is shelled daily from the occupied territory, and it is impossible to conduct Ukrainian offensives since the nuclear power plant is on the opposite side, and there is a risk of its destruction. People in these areas are systematically suffering from shortages of water, food, medicines and basic necessities.

As a result of the shelling, there is often a restriction on the entry of cars into the city. But it is also important for these people to have wooden planks, oilcloth, and plywood, to repair broken windows, doors, and roofs that have been destroyed by the shelling. Such minor repairs allow people to keep their houses in a habitable condition (if they have not been completely destroyed.)

To address this, they need:

1. Building Repair Materials: plywood, OSB (sheets, oriented strand board), oilcloth, timbers, wooden planks, fasteners (nails, screws), and metal sheets (profile sheets).
2. Essentials: portable gas ovens, medicines for the elderly and children, towels, bed linen.
3. Food: - canned food condensed milk, instant cereals and pasta, oil.

Project budget \$13,000.

The timing of funding should be as soon as possible, because the people are currently suffering from daily shelling. The project implementation period is 1.5 – 2 months. (depending on circumstances).

This project provides for both short-term and long-term perspectives, since people will be provided with food and the most necessary things that could be prepared for themselves and for children, to keep them alive and healthy, and the repair of their homes in which to live.
