

POTENTIAL GLOBAL GRANT PROJECT: X-RAY MACHINE FOR TEMPORARY COVID HOSPITAL IN GUATEMALA

THE ISSUE

The temporary Covid hospital in **Quetzaltenango** is using an old X-ray machine, that doesn't function well and was never designed for the volume of images needed at this time. It is too old for repair or upgrade.

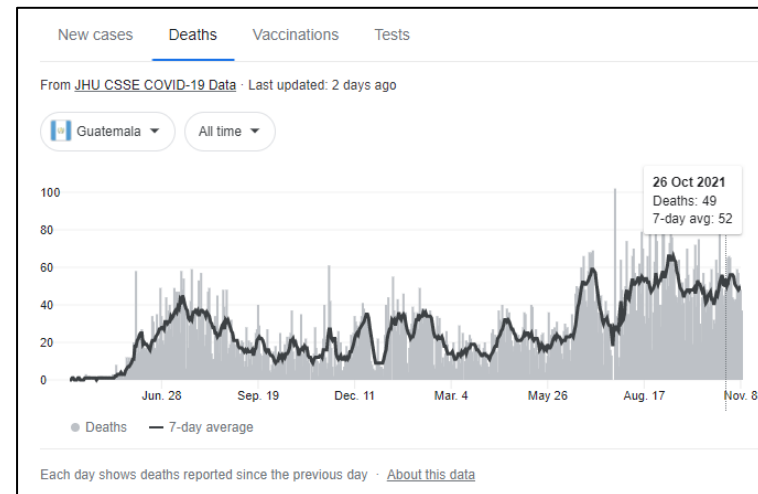

A new machine with suitable capability, including installation and training, has a **cost estimate of US\$76,516**. Our proposal is to include a moderate amount of additional PPE to the request, **rounding the total funds needed to US\$80,800**.

While Covid is expected to be a significant concern for more than a year, if the temporary hospital is closed, the machine would be moved to a different permanent hospital in the city where it will have significant value as well.

Potential Funding Plan

SOURCE	CLUB FUNDS	DDF	TRF MATCH
Heritage Park	\$4,000	\$15,000	\$12,000
3 D5360 clubs	\$6,000	\$15,000	\$12,000
2 USA clubs	\$6,000	\$6,000	\$4,800
Category Funding	\$16,000	\$36,000	\$28,800
GRAND TOTAL			\$80,800

Given the time required for DDF and TRF approvals, it is expected that a new machine could be **installed in Q4 of 2022**.

< Covid daily deaths are still high
