

**"Pasos firmes con Rotary"
(firm steps against clubfoot)**

Global Grant - Humanitarian project
operations for babies with clubfoot

Global grand project
so the children can walk

The Rotary Club Reynosa is looking for a International Rotary Club to share a global grant so we can treat a congenital defect known as clubfoot.

What is clubfoot?

It is a congenital defect that presents as a deformation of tendons of one or both feet in newborn children.

If it is not treated in time, it causes disability throughout the patient's life.

PROJECT'S GOAL

**16 children treated
so they can walk**

Sustainability

The sustainability of this project is achieved by successfully concluding operations in addition to including an educational program for parents.

In our research we have identified that a substantial part of the parents are unaware that a treatment to cure this congenital defect exists, but the problem is aggravated when they are not prepared to undergo a treatment that could last several years.

Funding

Total: \$57,890 USD

“...we work to give children back the miracle of being able to walk”
