

"Pasos firmes con Rotary"
(firm steps against clubfoot)

Global Grant - Humanitarian project
operations for babies with clubfoot

Global grand project
so the children can walk

The Rotary Club Reynosa is
looking for a International
Rotary Club to share a global
grant so we can treat a
congenital defect known as
clubfoot.

What is clubfoot?

It is a congenital defect that presents as a deformation of tendons of one or both feet in newborn children.

If it is not treated in time, it causes disability throughout the patient's life.

PROJECT'S GOAL

**16 children treated
so they can walk**

4 de cada
1,000 niños
nacen con
pie equino varo

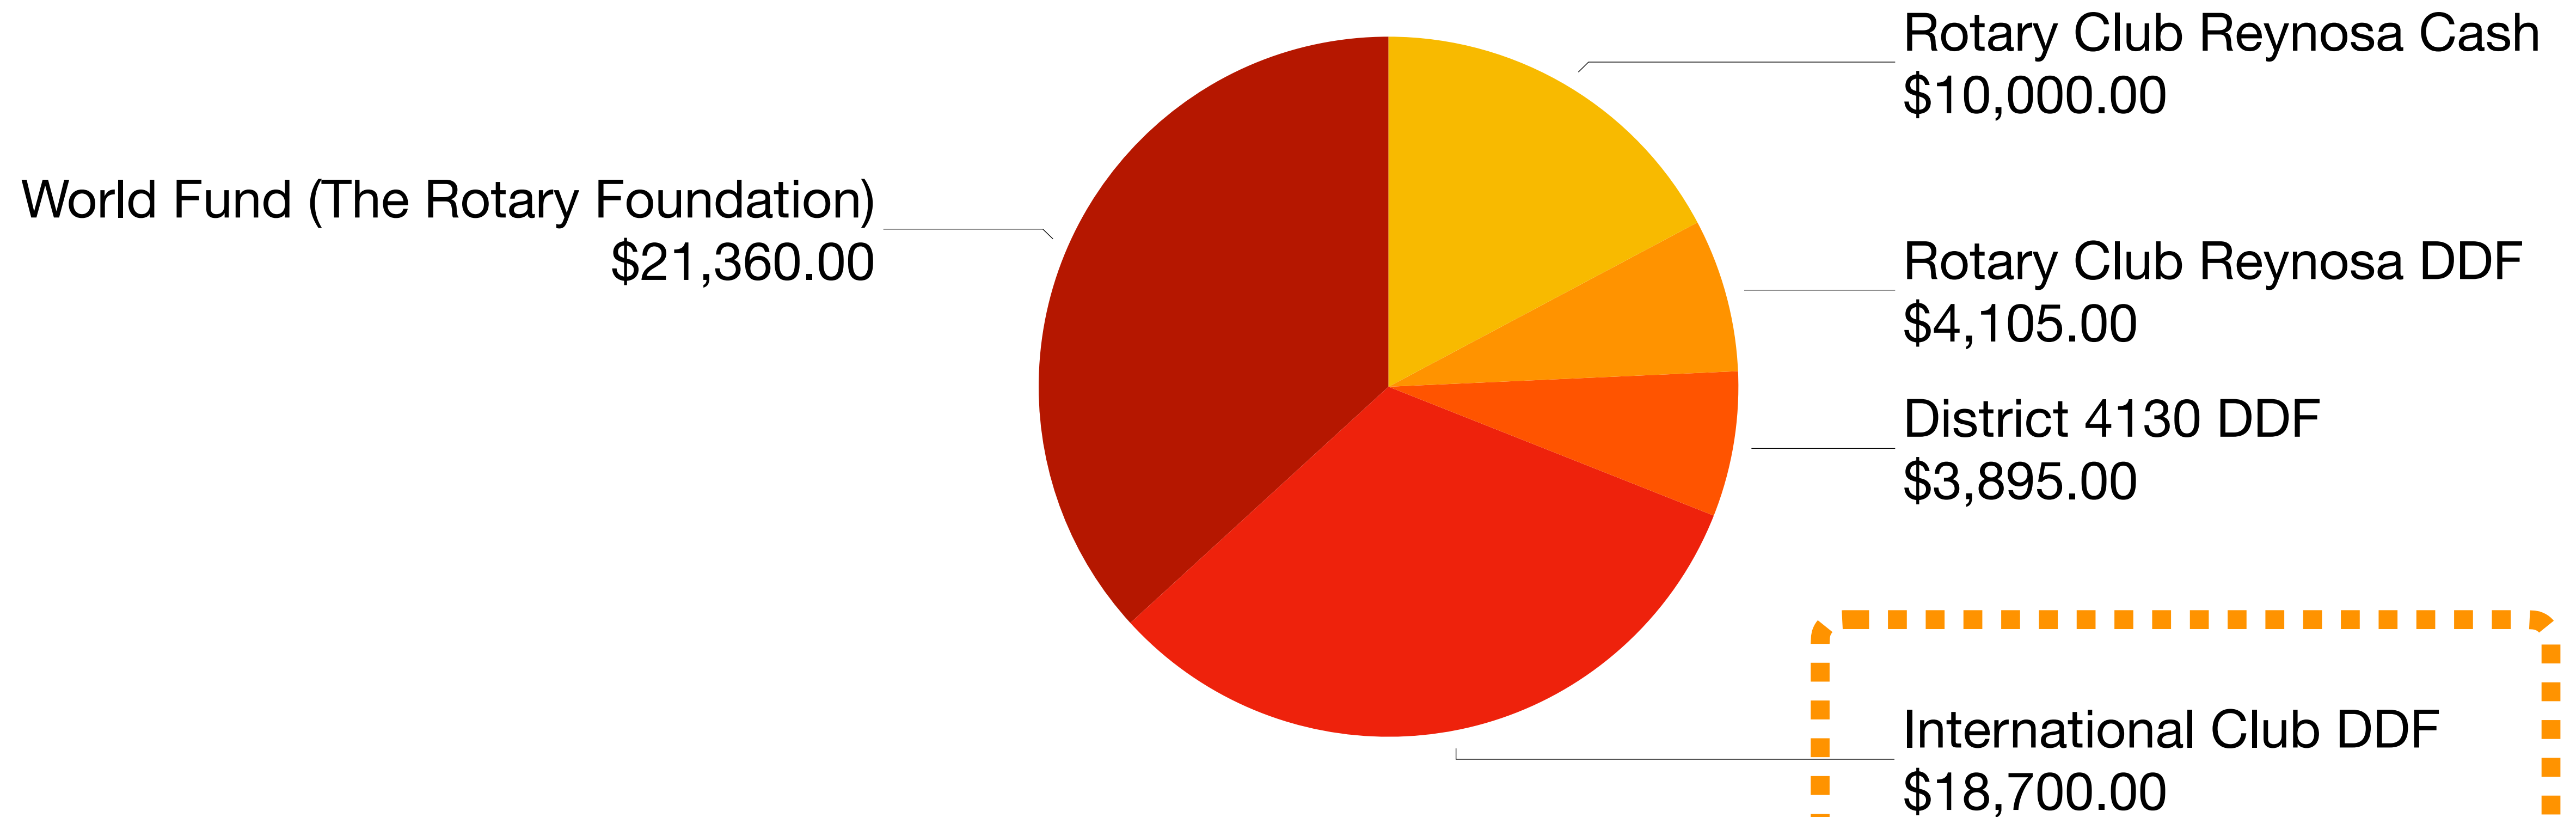

Sustainability

The sustainability of this project is achieved by successfully concluding operations in addition to including an educational program for parents.

In our research we have identified that a substantial part of the parents are unaware that a treatment to cure this congenital defect exists, but the problem is aggravated when they are not prepared to undergo a treatment that could last several years.

Funding

Total: \$58,060 USD

“...we work to give children back the miracle of being able to walk”
